PROFILE

Full-stack software engineer with hands-on experience building and deploying secure, production-ready web and mobile applications — including role-based access control, database-driven architectures, and authentication systems. Proven ability to ship real products end-to-end, from a live production system built during a professional internship to a 1st-place hackathon win building an AI-powered logistics platform. Seeking a full-time software engineering role where I can contribute to real-world products on a team.

EDUCATION

Bachelor / Computer Science

2021 – 2026

Imam Abdulrahman Bin Faisal University 🔗

PROFESSIONAL EXPERIENCE

King Fahad Medical City (KFMC)

06/2025 – 08/2025

Cooperative Training, Software Development

Riyadh, Saudi Arabia

Developed a production-ready full-stack Management Issue System with ASP.NET

🔗 Web Forms, C#, and SQL Server, featuring secure RBAC authentication, normalized database design, SMTP notifications, real-time chat, and cloud deployment.

PORTA — Eastern Region Urban Development Hackathon

2026

1st Place, Transport & Infrastructure Track

Al Khobar,

Contributed to an AI-powered logistics platform solving truck congestion at King Abdulaziz Port by replacing random queuing with intelligent, real-time scheduling.

Saudi Arabia

Recognized by the Eastern Province Deputy Governor and the Eastern Province Development Authority.

SKILLS

Web Development: React.js, Next.js, Node.js, Express.js, ASP.NET 🔗 (C#), HTML, CSS, Tailwind CSS, RESTful APIs

App Development: Flutter, Dart, React Native, Android Studio

Programming Languages: C#, Java, Python, JavaScript, SQL, C++

AI & Machine Learning: Python, Machine Learning Models, Data Analysis

Databases: Microsoft SQL Server, MySQL, MongoDB, Supabase, Database Design & Normalization

PROJECTS

Jadwel-AI Travel Discovery Platform 🔗

2026

bilingual (Arabic/English) platform consolidating Saudi Arabia's fragmented travel information into one AI-powered discovery and scheduling app.

- Built with Next.js and React Native; RAG pipeline via Supabase + pgvector; Python FastAPI for ML recommendations
- TSP-based route optimization engine and a verified local tour guide marketplace

Movie Ticket Booking Platform 🔗

08/2025 – 09/2025

Independent full-stack MERN project simulating an end-to-end cinema booking system.

- Real-time seat selection, Stripe payment integration with webhook-confirmed bookings
- Automated booking lifecycle (seat release, confirmations, reminders) via Inngest
- Admin dashboard for managing showtimes and bookings; auth via Clerk
